

Plug-and-Play for Packaging Lines

Rohrer Tools designs and produces customized complete modules for advanced FFS packaging lines. After successfully passing a FAT, 3 modules for the "cold forming", "heat sealing" and "cutting" processes were delivered to a leading pharmaceutical company.

The core of all modules are the process-determining tools; thanks to their solid design and high-precision manufacturing, they guarantee reproducible and reliable processes with maximum service life and availability.

- All modules combine maximum precision with minimum installation space.
- Starting with the concept phase, our technicians work closely with those of our customers - with the aim of efficient project implementation.
- Vertical flow-wrapping systems can also be equipped with our sealing and punching modules.
